SUMMARY

Product Designer with 1.5 years of experience designing enterprise SaaS platforms, web applications and mobile products from discovery through high-fidelity, functional prototypes. Skilled in user research, product strategy, information architecture, design systems and AI-assisted design workflows. I map how a complex system actually works before designing the interface that fits it — and build enough of it to know the decisions hold.

EXPERIENCE

Product Designer

1.5 years

Jiffy Software Solutions

- Led UX/UI design for **Metro Muscat**, delivering responsive web and mobile experiences aligned with business goals and customer needs.
- Led end-to-end product design for a **quick-commerce application for the Ghana market**: user research, competitor analysis, market validation, journey mapping and feature prioritisation.
- Conducted enterprise product research across **Healthcare CRM/ERP** and **Learning Management Systems** to define workflows, user journeys and scalable product architecture.
- Produced wireframes, high-fidelity UI, clickable prototypes and stakeholder-ready presentations in Figma.
- Translated business requirements into user experiences and reusable design components with cross-functional stakeholders.
- Used AI-assisted workflows and MCP servers to accelerate design exploration and prototyping.

SELECTED PROJECTS

Ntem — Quick Commerce Ecosystem for Ghana LIVE BUILD

Self-initiated

End-to-end product design · React prototype · ntem-prototype.vercel.app

- Designed and built a **three-sided marketplace** — customer, merchant and rider apps sharing one live order object across **30 interactive screens**.
- Architected a merchant-partitioned order model so failure isolation, per-store tracking, partial refunds and merchant privacy are structural rather than engineered case by case.
- Resolved four adaptive fulfilment models into a single plain-language choice at checkout, keeping the routing engine replaceable without changing the interface.
- Produced a **97-token design system** with every colour pairing verified against WCAG 2.1, and validated the order model with 21 passing assertions before building any UI.

Spine — Clinical Operations Design System LIVE BUILD

2026

Design system · Documentation · Front-end · spine-design-system.vercel.app

- Built a **role-aware design system** for hospital software spanning **14 documentation chapters**, five role workspaces and seven system states.
- Designed patient identity, permissions, break-glass access and audit traceability as reusable interface standards rather than per-screen decisions.
- Documented governance — contribution, review, ownership and release — so the system survives beyond its original author.
- Automated documentation renders from the running application with Playwright, preventing drift between the docs and the build.

Hospital Operating System — Healthcare Platform Research

In progress

Product strategy · Systems research

- Mapped **11 operational domains, 42 departments and 443 workflows** across a full hospital operating model; benchmarked **19 competing vendors**.
- Phase 1 of an 18-phase case study — discovery and problem definition complete, information architecture and interface design next.

Google Cloud Platform — Enterprise Navigation Concept

Independent

Information architecture · Enterprise SaaS

- Reimagined GCP's navigation architecture around user intent rather than internal product families, to improve service discoverability for enterprise users.
- Benchmarked AWS and Azure navigation patterns, then delivered user flows, IA, wireframes and an interactive navigation prototype.

Learning Management System

Product design

- Researched and designed scalable learning workflows: onboarding, course management, assessments, progress tracking and instructor dashboards.
- Built wireframes and user flows grounded in user research and competitor benchmarking.

SKILLS

DESIGN	User research, UX/UI design, user flows, journey mapping, information architecture, interaction design, wireframing, prototyping, design systems, visual design, dashboard design, mobile & web, responsive design, accessibility, usability testing, heuristic evaluation
PRODUCT	Product strategy, product thinking, competitive analysis, market research, requirement gathering, MVP planning, feature prioritisation, enterprise SaaS, design documentation
TOOLS	Figma, FigJam, Miro, Notion, Airtable, Google Workspace, Cursor AI, MCP servers, ChatGPT, React & Next.js (working knowledge), Google Cloud Platform (fundamentals)
STRENGTHS	Problem solving, systems thinking, communication, stakeholder management, cross-functional collaboration, critical thinking, presentation

EDUCATION

B.Tech, Mechanical Engineering

2017 - 2021

KIET Group of Institutions · Google UX Design Professional Certificate

BEYOND WORK

- Co-founded a furniture and interior design studio — established brand identity, customer experience and early business strategy.
- Wildlife photographer; creator of **Detours & Discoveries**, a photography magazine published as an Amazon eBook.
- Hosted a podcast on technology, economics, public policy, psychology and design.
